

Innovation & Excellence

Fascinating technologies
that have the potential
to change our
Perceptions!

About Us

Conceptualization

**Early
Days**

A team of professionals with the expertise in various fields deliberated for the months and years to chip-in and kick start the research work on some high impact technologies for social good.

During our early days every team member was working as a part time researcher and was laying the foundation for Mimanso.

Formalization

**2009
2010**

After quite a few years of hard work, the team decided to firm up the arrangement and Mimanso was born. The research laboratories became functional in USA & India. And the legal entities were created.

Deployments

**2016
2017
2026**

With the persistent effort of every team member, Mimanso deployed its first "Power Multiplier" Unit in South East Asia in the year 2016 and its first "Charge Recycler" in North America for the field trials only.

And after observing the satisfactory performance of the deployed technologies, Mimanso is all set to roll-out its "Charge Recycler" under the brand name "Nuki" and "Solid-State Fuel Less Generator" under the brand name "Hesy".

Proudly presents the trend-setting **Solid-State Fuel-less Generator** that is slated to

Rock

the Industry Soon...

HESY

Fascinating Hyper Energy System

NO FUEL! NO SOUND! NO SMOKE!

Hesy Generator enables you to enjoy Kilowatts & Megawatts of
hassle-Free electricity.

AND YOU DON'T NEED ANY OTHER POWER CONNECTION AT ALL.

The standard available Hesy models are

50 kVA – Three Phase

100 kVA – Three Phase

(Users can connect multiples of them together to get the higher capacity)

Mimanso is ramping-up its capability to take-up the projects ranging from hundreds of
Kilowatts to Megawatts in the days to come.

www.hesy.in

HEST

5 Kilowatts

(5 Kilowatts Hesy UNO is more of a proof of concept and for the general public to get a feel of it)

How does it work?

Hesy is an abbreviation of HYPER ENERGY SYSTEM. Hesy does not require messy and space guzzling PV solar panels. Nor does it require any fuel. Hesy can work 24x7 with peak efficiency; all day and all night during winter and rainy days too. Channelized Passive energy needs to be amplified and regulated for practical use.

Hesy technology makes it possible the capture of passive solar energy and enables the captured energy to be amplified and regulated. The ambient energy of solar system is:

- Continuously available without any rest or cost
- Having tremendous energy
- Perpetual

Further, it is a clever way of applying various laws of physics. Just enjoy the result rather than worrying about the nitty-gritty of it.

Price

Rs. 40,000/- Per kVA + Applicable Taxes

Warranty

One-year On-Site warranty for all models of Hesy Generator. Warranty can be extended annually at a cost 5% of the basic Hesy value.

Hesy Technology

Hesy is based on our proprietary **Solar 2.0** (Advanced PB Solar Panel with Controller) technology. The Solar 2.0 panel is an e-panel with built in e-devices where ionization takes place and the controller module converts it into usable power. It operates without relying on traditional power sources, breaking the conventional boundaries of science.

Our technology is inspired by a century old famous quote by the Greatest Scientist of his time Mr. Nikola Tesla.

"The movement of coils and magnets at point A (the generator) fluxes electrons, which in turn, excite electrons at point B (your house or factory). None of the electrons at point A are ever transmitted to point B.

The electrons remain forever intact and available for further fluxing. This is not allowed in Newtonian Physics (electrodynamics and laws of conservation). Clearly, these laws are all tampered and inadequate."

The promoters of Mimanso started working on this theory and after the continuous and sustained effort by the team for over 16 years has come-up with a solution that makes it possible to multiply the power of a DC CHARGE to an UNLIMITED time and at the same time retaining its charge INTACT!

Features & Application

THE SALIENT FEATURES OF HESY

1. Delivers NON-STOP electricity irrespective of Climatic Conditions.
2. Option of Remote Operation in all the models of Hesy.
3. Compact in size.
4. Does not require messy solar panels.
5. To be housed inside a room.
6. Comparatively lighter.
7. Smokeless.
8. No raw-material required. Zero maintenance cost (Except annual maintenance charges).
9. For higher capacity requirement, one can wire together more than one Hesy device and draw a higher power.

APPLICATIONS

> Domestic

- a) Power for Lighting, Air conditioners and all other household equipments.
- b) Small Motors & pumps operation.
- c) Cooking (You can use induction stove). It can be used in homes, canteens, and small hotels. It is left to the individual's imaginations.
- d) During chilly climate, get 24 hours hot water. And Homes can be heated FREE.

> Commercial

- e) Heating. Hotels can provide 24 hours hot water at no extra cost.
- f) You can power offices & factories.

> Agriculture

- g) Farmers can use the same for powering the pumps enabling timely irrigation.
- h) Greenhouses.

> Industries

- i) Small & Medium Factories too can be powered 24x7.
- j) IT Sectors can do away with UPS & Backup Generators and opt for novel Hesy.

Mimanso Corporation
